An excellent companion to Rodak's Hematology: Clinical Principles amp; Applications, this atlas is ideal for helping you accurately identify cells at the microscope. It offers complete coverage of the basics of hematologic morphology, including examination of the peripheral blood smear, basic maturation of the blood cell lines, and discussions of a variety of clinical disorders. Over 400 photomicrographs, schematic diagrams, and electron micrographs visually clarify hematology from normal cell maturation to the development of various pathologies.
The completely revised fourth edition of the Color Atlas of Clinical Hematology gives you the most comprehensive, authoritative, up-to-date visual assistance you'll find in any hematology atlas. It vividly depicts the pathogenesis, clinical, morphologic, and investigational aspects of the full range of blood disorders you see in everyday practice to help you diagnose virtually anything.

Featuring hundreds of full-color photomicrographs, Hematology: Clinical Principles and Applications prepares you for a job in the clinical lab by exploring the essential aspects of hematology. It shows how to accurately identify cells, simplifies hemostasis and thrombosis concepts, and covers normal hematopoiesis through diseases of erythroid, myeloid, lymphoid, and megakaryocytic origins. This book also makes it easy to understand complementary testing areas such as flow cytometry, cytogenticics, and molecular diagnostics. Well-known authors Bernadette Rodak, George Fritsma, and Elaine Keohane cover everything from working in a hematology lab to the parts and functions of the cell to laboratory testing of blood cells and body fluid cells. Full-color illustrations make it easier to...

This comprehensive text examines normal hematopoiesis through diseases of erythroid, myeloid, lymphoid and megakaryocytic origins. Hemostasis and coagulation theory, testing, and instrumentation are also thoroughly discussed. Beautiful full-color illustrations throughout the text enhance comprehension and allow students to realistically visualize hematology concepts. Detailed, full-color illustrations appear near hematology concept discussions to visually support comprehension and recognition. Opening Case Studies present real-life scenarios to apply concepts presented in each chapter. Learning Objectives and Review Questions work together to list expected outcomes and then test those concepts for each chapter. A Bulleted Summary highlights the key concepts at the end of each chapter...

Diagnostic Cytology and Hematology of the Horse is a practical reference that presents common clinical findings in an easy-to-use text/atlas format. A general chapter discusses sample collections and techniques, followed by a 'systems' approach and chapters on specific types of fluid. Within systems chapters, normal findings are established and then abnormal findings are presented by class of problems, such as bacterial lesions, fungal lesions, parasitic lesions, etc. in the case of the eye. Algorithms on sample evaluations enhance text discussions by guiding readers to the most likely cytologic diagnosis. In addition, a color plate section features 64 illustrations for convenient comparison of cell types and infectious agents. A detailed index makes this edition even more useful as a...
